20 December 1963

MEMORANDUM FOR: Chief, Development Branch

SUBJECT : Memorandum TID/TAB-113/63

1. This memorandum was sent to P&DS in reply to the request concerning accuracy requirements for linear, terrestrial photography measurements.

2. It was the plan, preceeding this original memorandum, to try to justify the modification of the Giant-Nadir Plotter for use as a comparator, if its accuracies were compatible with TAB requirements. The reply received on this date states, in essence, that TAB would rather consider a plotter similar to those manufactured by Santoni, Kern or Zeiss and that specifications or requirements for an instrument will not be considered until late 1964 or in 1965.

3. In view of these facts it would be advisable to indicate to [ ] that the modifications to the Giant-Nadir Plotter are not justifiable. In order that the plotter may be used as test equipment, however, [ ] suggested its use in a feasibility study of the Linear Phasolver. It is recommended that the Nadir-Plotter be shipped to the [ ] [ ] for its subsequent use in this program. Arrangements can be made in the near future for its delivery [ ]
